

Peek-A-Blue Russian Sage
Perovskia atriplicifolia 'Peek-A-Blue'

Height: 26 inches
Spread: 26 inches
Spacing: 20 inches
Sunlight: ☉
Hardiness Zone: 4

Description:

This compact variety forms a dense mound of fragrant gray-green leaves, producing multiple spikes of sky-blue flowers from summer until fall; excellent for the garden or mixed containers

Ornamental Features

Peek-A-Blue Russian Sage features delicate spikes of sky blue flowers rising above the foliage from early summer to early fall. The flowers are excellent for cutting. Its attractive fragrant narrow leaves emerge silver in spring, turning grayish green in color throughout the season. The fruit is not ornamentally significant.

Landscape Attributes

Peek-A-Blue Russian Sage is an herbaceous perennial with an upright spreading habit of growth. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and is best cut back to the ground in late winter before active growth resumes. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Peek-A-Blue Russian Sage is recommended for the following landscape applications;

Planting & Growing

Peek-A-Blue Russian Sage will grow to be about 20 inches tall at maturity, with a spread of 26 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 20 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years.

This plant should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type, but has a definite preference for alkaline soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
