

Felix Catmint

Nepeta x faassenii 'Felix'

Plant Height: 12 inches

Flower Height: 16 inches

Spread: 24 inches

Sunlight:

Hardiness Zone: 4

Other Names: Faassen's Catmint

Description:

Blanketed with lavender flowers from late spring to late summer, it catches the eye when massed; it will bloom in waves all summer; a fast-growing groundcover that will drive your cats wild

Ornamental Features

Felix Catmint has masses of beautiful spikes of lightly-scented lavender flowers rising above the foliage from late spring to late summer, which are most effective when planted in groupings. Its attractive small fragrant pointy leaves remain grayish green in color throughout the season. The fruit is not ornamentally significant.

Landscape Attributes

Felix Catmint is a dense herbaceous perennial with a mounded form. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

Felix Catmint is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover
- Herb Gardens

Planting & Growing

Felix Catmint will grow to be about 12 inches tall at maturity extending to 16 inches tall with the flowers, with a spread of 24 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years.

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
